Advanced Knitting Technology

Growth with vision

Innovation based on experience

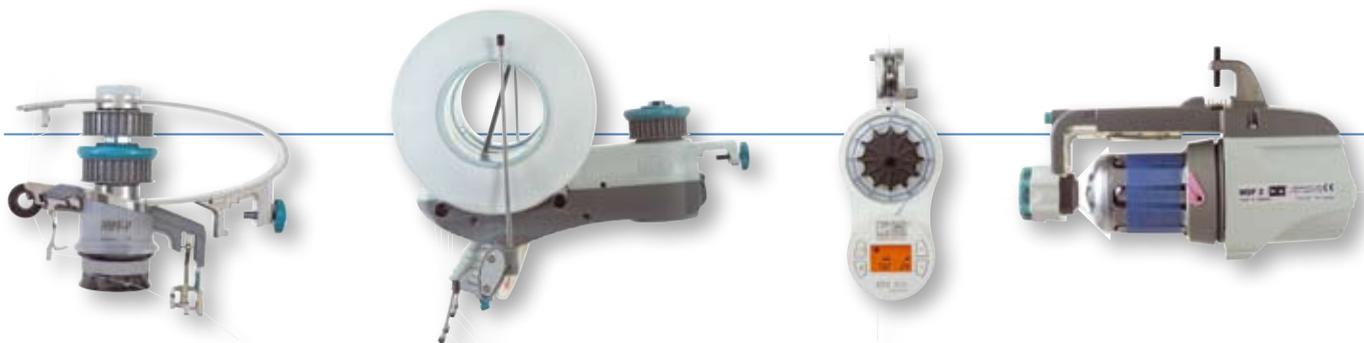

Top quality, made in Germany

Memminger-Iro GmbH was founded in 1957 in Freudenstadt and today has its headquarters at Dornstetten, in Germany's Black Forest region. The production facility at Dornstetten covers 22 500 square meters and employs 230 people. In all, the company employs 400 people world-wide. Memminger-Iro GmbH is a world-leader developing and manufacturing hi-tech equipment for the textile industry. We deliver to over 100 countries world-wide.

The world-wide success of Memminger-Iro GmbH is based on that original, far-sighted decision by the company's founders to develop machines which were better than the competing products that the market had to offer. Today, this same uncompromising market-oriented policy continues to underpin the company's research and development effort. Our commitment remains the continuous development of existing technology.

Innovative process control incorporating the very latest technical developments. Our yarn feed, lubrication and control systems are designed to ensure that your knitting machines maintain high efficiency rates and produce to the highest quality standards. Our quality assurance system guarantees that our products can meet the challenges of the future.

Together in partnership

Promoting progress

Ready for the future

The key factors in the continuing business success of Memminger-Iro are a solid partnership with our employees and a shared commitment to the company's mission.

Our employees are skilled professionals, all committed to implementing the company mission in their daily work. Our company success continues to be built on the experience and expertise of committed professionals with a shared mission.

At Memminger-Iro encouraging the continuing education and professional training of our employees is a top priority. "Promoting progress" in professional skills is what has made us so successful. As a member of a dynamic team backed by the company's experience and expertise, young people can lay the foundations for a successful career as a skilled professional in the industry. An attractive continuous training programme keeps our employees ready to meet the challenges of the future.

Memminger-Iro is continuously developing its product ranges. We place special emphasis on the development of central machine control, machine monitoring, intelligent sensor technology and electronics. Our primary concerns in these areas are high-levels of user friendliness and the simple repeatability of quality parameters. Innovative products ensure that our success and that of our customers will continue well into the future.
